

I am a highly motivated master's student in apprenticeship studying Automation and Electrical Engineering looking for a permanent contract in the field of embedded software development. I have great teamwork skills and work in a goal-orientated manner. I have acquired much practical and technical knowledge on programming and electronic systems that I would like to apply and develop in your company.

Education

2022-2025 - Master's degree in Automation and Electrical Engineering, National Institute of Applied Sciences, Toulouse

- Computer Science and Security: Embedded Systems Architectures, Computer Security, Object-Oriented Design
- Automation: Multivariable Systems, Optimal Control, Machine Learning and Petri Nets
- Electronic Circuit Design: Digital Acquisition, Control Chains and Signal Processing
- Project: Designed, programmed and created an electronic board for the 60th anniversary of INSA in a team

2020-2022 - University Diploma in Electrical Engineering and Industrial Computing, University Institute of Technology, Toulouse

- Electrical Engineering: Hyper-frequencies, Telecommunication, Propagation
- Fundamentals of Electricity: Electromagnetism, Linear Circuits in Periodic and Transient States
- Project: Designed and coded a game in C

2018-2020 - Scientific baccalaureate (option Engineering Science), Stephane Hessel Lycée, Toulouse

- Equivalent to High School Diploma in Science and Engineering Science

Skills

Programming / Software

- Language in digital electronics: VHDL (Quartus)
- Microprocessor language: C, C++, Assembly (Keil)
- Programming language: Java, Python, Git (Eclipse, VS Code)
- Virtualization/Containers: VirtualBox, Docker, OpenStack
- Frontend: HTML, CSS, JavaScript, React Native
- PLC language: Ladder, ST, FBD (TIA Portals)
- Computer aided design: SolidWorks, Proteus, Altium

Technical

- Design and assembly of electronic cards
- Debugging tools and software security testing
- Familiarity with the concept of microcontroller memory
- Computer science: MS Office
- Linguistic: French native language
- English intermediate level
- Spanish intermediate level

Work experience

International Engineering Mobility – Vitesco Technologies (July 2024 - September 2024):

- Studied and implemented solutions for Flash memory management on a new microcontroller
- Tested and validated Flash functionalities to ensure reliability of the new platform.
- Created the environment to automate and optimize tests, using Python and CMM scripts.

Embedded Software Engineer apprenticeship - Vitesco Technologies (September 2022 - August 2025):

- Developed generic embedded solutions for ECUs reprogramming.
- Tested and debugged code to ensure proper operation and problem resolution
- Corrected the code according to MISRA and CERT standards to ensure the security and quality of the software.
- Presented regular project reviews to team members in English

Electronic method technician internship - Siemens Mobility (April - July 2022):

- Studied the VAL208NG brake rack system and developed a test solution
- Conducted functional tests on the brake rack cards to ensure optimal performance

Extracurriculum activities

- Played rugby since 2007 as a scrum half / winger at a high competitive level (Federal 1 league) and achieving a notable 3rd place in the French championship.
- Practiced swimming for 6 years in a club.
- Independent travel in Europe (Italy, Ireland, Holland, Egypt)
- Assessor of a polling station for the regional and departmental elections
